EXTERNAL ROLLER SHUTTERS

VISIBLE CABINETS

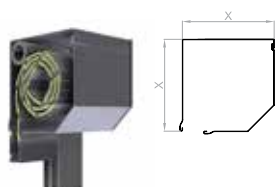

External mount-on roller shutters are the most widely used among all shutters, allowing for independent installation on all types of buildings. They are suitable for new construction as well as for renovation of older buildings. There is no need to plan the installation of these shutters in advance since they are mounted on a finished facade.

CONCEALED CABINETS

Mount-on roller shutters are mounted on the building after window installation and before the building façade is created. The concealed shutter on the other hand requires planning in advance, so this type of shutters is more suitable for new constructions. If you do not want to cover the window opening with the shutter, it is important to raise the roller shutter above the window.

BUILD-IN ROLLER SHUTTERS

Built-in roller shutters are suitable for installation in newly constructed or renovated buildings.

This type of shutters are characteristically mounted while the windows are being installed (later installation is not possible), so it is important to take this into account during the planning phase of construction.

The box is completely invisible from the outside, covered with the facade, which means it does not affect the external appearance of the building. Due to additional insulation in PVC box these shutters are also the most insulating of all shutters.

MULTI-ROLLBOX

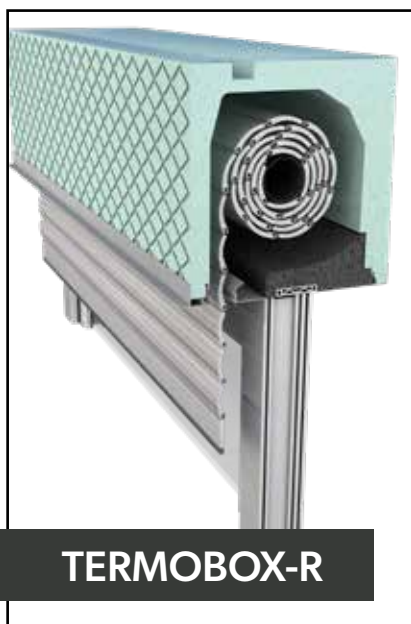

SIZE OF CABINETS:
200 x 230 mm

INLINE 225

SIZE OF CABINETS:
223 x 230 mm

TERMOBOX-R

- » Cabinet size 300 x 300 mm
- » Excellent insulation
- » Sound insulation
- » Air tightness
- » Concealed installation
- » Choice of the type of shading during window installation
- » Possible direct installation under the AB panel without preparing a groove in the sill.
